Reproduction of the means of production

Everyone (including the bourgeois economists whose work is national accounting, or the modern ‘macro-economic’ ‘theoreticians’) now recognizes, because Marx compellingly proved it in *Capital* Volume Two, that no production is possible which does not allow for the reproduction of the material conditions of production: the reproduction of the means of production.

The average economist, who is no different in this than the average capitalist, knows that each year it is essential to foresee what is needed to replace what has been used up or worn out in production: raw material, fixed installations (buildings), instruments of production (machines), etc. I say the average economist = the average capitalist, for they both express the point of view of the firm, regarding it as sufficient simply to give a commentary on the terms of the firm’s financial accounting practice.

But thanks to the genius of Quesnay who first posed this ‘glaring’ problem, and to the genius of Marx who resolved it, we know that the reproduction of the material conditions of production cannot be thought at the level of the firm, because it does not exist at that level in its real conditions. What happens at the level of the firm is an effect, which only gives an idea of the necessity of reproduction, but absolutely fails to allow its conditions and mechanisms to be thought.

A moment’s reflection is enough to be convinced of this: Mr X, a capitalist who produces woollen yarn in his spinning-mill, has to ‘reproduce’ his raw material, his machines, etc. But he does not produce them for his own production — other capitalists do: an Australian sheep-farmer, Mr Y, a heavy engineer producing machine-tools, Mr Z, etc., etc. And Mr Y and Mr Z, in order to produce those products which are the condition of the reproduction of Mr X’s conditions of production, also have to reproduce the conditions of their own production, and so on to infinity — the whole in proportions such that, on the national and even the world market, the demand for means of production (for reproduction) can be satisfied by the supply.

In order to think this mechanism, which leads to a kind of ‘endless chain’, it is necessary to follow Marx’s ‘global’ procedure, and to study in particular the relations of the circulation of capital between Department I (production of means of production) and Department II (production of means of consumption), and the realization of surplus-value, in *Capital*, Volumes Two and Three.

We shall not go into the analysis of this question. It is enough to have mentioned the existence of the necessity of the reproduction of the material conditions of production.
Reproduction of labour power

However, the reader will not have failed to note one thing. We have discussed the reproduction of the means of production — but not the reproduction of the productive forces. We have therefore ignored the reproduction of what distinguishes the productive forces from the means of production, i.e. the reproduction of labour power.

From the observation of what takes place in the firm, in particular from the examination of the financial accounting practice which predicts amortization and investment, we have been able to obtain an approximate idea of the existence of the material process of reproduction, but we are now entering a domain in which the observation of what happens in the firm is, if not totally blind, at least almost entirely so, and for good reason: the reproduction of labour power takes place essentially outside the firm.

How is the reproduction of labour power ensured? It is ensured by giving labour power the material means with which to reproduce itself by wages. Wages feature in the accounting of each enterprise, but as ‘wage capital’, not at all as a condition of the material reproduction of labour power.

However, that is in fact how it ‘works’, since wages represent only that part of the value produced by the expenditure of labour power which is indispensable for its reproduction: sc. indispensable to the reconstitution of the labour power of the wage-earner (the wherewithal to pay for housing, food and clothing, in short to enable the wage-earner to present himself again at the factory gate the next day — and every further day God grants him); and we should add: indispensable for raising and educating the children in whom the proletarian reproduces himself (in n models where \( n = 0, 1, 2, \text{etc.} \)) as labour power.

Remember that this quantity of value (wages) necessary for the reproduction of labour power is determined not by the needs of a ‘biological’ Guaranteed Minimum Wage (Salaire Minimum Interprofessionnel Garanti) alone, but by the needs of a historical minimum (Marx noted that English workers need beer while French proletarians need wine) — i.e. a historically variable minimum.

I should also like to point out that this minimum is doubly historical in that it is not defined by the historical needs of the working class ‘recognized’ by the capitalist class, but by the historical needs imposed by the proletarian class struggle (a double class struggle: against the lengthening of the working day and against the reduction of wages).

However, it is not enough to ensure for labour power the material conditions of its reproduction if it is to be reproduced as labour power. I have said that the available labour power must be ‘competent’, i.e. suitable to be set to work in the complex system of the process of production. The development of the productive forces and the type of unity historically constitutive of the productive forces at a given moment produce the result that the labour power has to be (diversely) skilled and therefore reproduced as such. Diversely: according to the requirements of the socio-technical division of labour, its different ‘jobs’ and ‘posts’.

How is this reproduction of the (diversified) skills of labour power provided for in a capitalist regime? Here, unlike social formations characterized by slavery or serfdom, this reproduction of the skills of labour power tends (this is a tendential law) decreasingly to be provided for ‘on the spot’ (apprenticeship within production itself), but is achieved more and more outside production: by the capitalist education system, and by other instances and institutions.

What do children learn at school? They go varying distances in their studies, but at any rate they learn to read, to write and to add — i.e. a number of techniques, and a number of other things as well, including elements (which may be rudimentary or on the contrary thoroughgoing) of ‘scientific’ or ‘literary culture’, which are directly useful in the different jobs in production (one instruction for manual workers, another for technicians, a third for engineers, a final one for higher management, etc.). Thus they learn ‘know-how’.

But besides these techniques and knowledges, and in learning them, children at school also learn the ‘rules’ of good behaviour, i.e. the attitude that should be observed by every agent in the division of labour, according to the job he is ‘destined’ for: rules of morality, civic and professional conscience, which actually means rules of respect for the socio-technical division of labour and ultimately the rules of the order established by class domination. They also learn to ‘speak proper French’, to ‘handle’ the workers correctly,
I shall therefore discuss it. But in order to obtain the means to discuss it, I shall have to make another long detour.

The second comment is that in order to make this detour, I am obliged to re-raise my old question: what is a society?

Infrastructure and Superstructure

On a number of occasions I have insisted on the revolutionary character of the Marxist conception of the 'social whole' insofar as it is distinct from the Hegelian 'totality'. I said (and this thesis only repeats famous propositions of historical materialism) that Marx construed the structure of every society as constituted by 'levels' or 'instances' articulated by a specific determination: the infrastructure, or economic base (the 'unity' of the productive forces and the relations of production) and the superstructure, which itself contains two 'levels' or 'instances': the politico-legal (law and the State) and ideology (the different ideologies, religious, ethical, legal, political, etc.).

Besides its theoretico-didactic interest (it reveals the difference between Marx and Hegel), this representation has the following crucial theoretical advantage: it makes it possible to inscribe in the theoretical apparatus of its essential concepts what I have called their respective indices of effectiveness. What does this mean?

It is easy to see that this representation of the structure of every society as an edifice containing a base (infrastructure) on which are erected the two 'floors' of the superstructure, is a metaphor, to be quite precise, a spatial metaphor: the metaphor of a topography (topique). Like every metaphor, this metaphor suggests something, makes something visible. What? Precisely this: that the upper floors could not 'stay up' (in the air) alone, if they did not rest precisely on their base.

Thus the object of the metaphor of the edifice is to represent above all the 'determination in the last instance' by the economic base. The effect of this spatial metaphor is to endow the base with an index of effectiveness known by the famous terms: the determination in the last instance of what happens in the upper 'floors' (of the superstructure) by what happens in the economic base.
Given this index of effectivity 'in the last instance', the 'floors' of the superstructure are clearly endowed with different indices of effectivity. What kind of indices?

It is possible to say that the floors of the superstructure are not determinant in the last instance, but that they are determined by the effectivity of the base; that if they are determinant in their own (as yet undefined) ways, this is true only insofar as they are determined by the base.

Their index of effectivity (or determination), as determined by the determination in the last instance of the base, is thought by the Marxist tradition in two ways: (1) there is a 'relative autonomy' of the superstructure with respect to the base; (2) there is a 'reciprocal action' of the superstructure on the base.

We can therefore say that the great theoretical advantage of the Marxist topography, i.e. of the spatial metaphor of the edifice (base and superstructure) is simultaneously that it reveals that questions of determination (or of index of effectivity) are crucial; that it reveals that it is the base which in the last instance determines the whole edifice; and that, as a consequence, it obliges us to pose the theoretical problem of the types of 'derivatory' effectivity peculiar to the superstructure, i.e. it obliges us to think what the Marxist tradition calls conjointly the relative autonomy of the superstructure and the reciprocal action of the superstructure on the base.

The greatest disadvantage of this representation of the structure of every society by the spatial metaphor of an edifice, is obviously the fact that it is metaphorical; i.e. it remains descriptive.

It now seems to me that it is possible and desirable to represent things differently. NB, I do not mean by this that I want to reject the classical metaphor, for that metaphor itself requires that we go beyond it. And I am not going beyond it in order to reject it as outworn. I simply want to attempt to think what it gives us in the form of a description.

I believe that it is possible and necessary to think what characterizes the essential of the existence and nature of the superstructure on the basis of reproduction. Once one takes the point of view of reproduction, many of the questions whose existence was indicated by the spatial metaphor of the edifice, but to which it could not give a conceptual answer, are immediately illuminated.

My basic thesis is that it is not possible to pose these questions (and therefore to answer them) except from the point of view of reproduction.

[...]

The state ideological apparatuses

Thus, what has to be added to the 'Marxist theory' of the State is something else.

Here we must advance cautiously in a terrain which, in fact, the Marxist classics entered long before us, but without having systematized in theoretical form the decisive advances implied by their experiences and procedures. Their experiences and procedures were indeed restricted in the main to the terrain of political practice.

In fact, i.e. in their political practice, the Marxist classics treated the State as a more complex reality than the definition of it given in the 'Marxist theory of the State', even when it has been supplemented as I have just suggested. They recognized this complexity in their practice, but they did not express it in a corresponding theory.¹

I should like to attempt a very schematic outline of this corresponding theory. To that end, I propose the following thesis.

In order to advance the theory of the State it is indispensable to take into account not only the distinction between State power and State apparatus, but also another reality which is clearly on the side of the (repressive) State apparatus, but must not be confused with it. I shall call this reality by its concept: the ideological State apparatuses.

What are the ideological State apparatuses (ISAs)?

They must not be confused with the (repressive) State apparatus. Remember that in Marxist theory, the State Apparatus (SA) contains: the Government, the Administration, the Army, the Police, the Courts, the Prisons, etc., which constitute what I shall in future call the Repressive State Apparatus. Repressive suggests that the State Apparatus in question 'functions by violence' – at least ultimately (since repression, e.g. administrative repression, may take non-physical forms).

I shall call Ideological State Apparatuses a certain number of realities which present themselves to the immediate observer in the form of distinct and specialized institutions. I propose an empirical list of these which will obviously have to be examined in
detail, tested, corrected and reorganized. With all the reservations implied by this requirement, we can for the moment regard the following institutions as Ideological State Apparatuses (the order in which I have listed them has no particular significance):

- the religious ISA (the system of the different Churches),
- the educational ISA (the system of the different public and private 'Schools'),
- the family ISA,
- the legal ISA,
- the political ISA (the political system, including the different Parties),
- the trade-union ISA,
- the communications ISA (press, radio and television, etc.),
- the cultural ISA (Literature, the Arts, sports, etc.).

I have said that the ISAs must not be confused with the (Repressive) State Apparatus. What constitutes the difference?

As a first moment, it is clear that while there is one (Repressive) State Apparatus, there is a plurality of Ideological State Apparatuses. Even presupposing that it exists, the unity that constitutes this plurality of ISAs as a body is not immediately visible.

As a second moment, it is clear that whereas the unified (Repressive) State Apparatus belongs entirely to the public domain, much the larger part of the Ideological State Apparatuses (in their apparent dispersion) are part, on the contrary, of the private domain. Churches, Parties, Trade Unions, families, some schools, most newspapers, cultural ventures, etc., are private.

We can ignore the first observation for the moment. But someone is bound to question the second, asking me why I regard as Ideological State Apparatuses, institutions which for the most part do not possess public status, but are quite simply private institutions. As a conscious Marxist, Gramsci already forestalled this objection in one sentence. The distinction between the public and the private is a distinction internal to bourgeois law, and valid in the (subordinate) domains in which bourgeois law exercises its 'authority'. The domain of the State escapes it because the latter is 'above the law': the State, which is the State of the ruling class, is neither public nor private; on the contrary, it is the precondition for any distinction between public and private. The same thing can be said from the starting-point of our State Ideological Apparatuses. It is unimportant whether the institutions in which they are realized are 'public' or 'private'. What matters is how they function. Private institutions can perfectly well 'function' as Ideological State Apparatuses. A reasonably thorough analysis of any one of the ISAs proves it.

But now for what is essential. What distinguishes the ISAs from the (Repressive) State Apparatus is the following basic difference: the Repressive State Apparatus functions 'by violence', whereas the Ideological State Apparatuses function 'by ideology'.

I can clarify matters by correcting this distinction. I shall say rather that every State Apparatus, whether Repressive or Ideological, 'functions' both by violence and by ideology, but with one very important distinction which makes it imperative not to confuse the Ideological State Apparatuses with the (Repressive) State Apparatus.

This is the fact that the (Repressive) State Apparatus functions massively and predominantly by repression (including physical repression), while functioning secondarily by ideology. (There is no such thing as a purely repressive apparatus.) For example, the Army and the Police also function by ideology both to ensure their own cohesion and reproduction, and in the 'values' they propound externally.

In the same way, but inversely, it is essential to say that for their part the Ideological State Apparatuses function massively and predominantly by ideology, but they also function secondarily by repression, even if ultimately, but only ultimately, this is very attenuated and concealed, even symbolic. (There is no such thing as a purely ideological apparatus.) Thus Schools and Churches use suitable methods of punishment, expulsion, selection, etc., to 'discipline' not only their shepherds, but also their flocks. The same is true of the Family. ... The same is true of the cultural ISApparatus (censorship, among other things), etc.

Is it necessary to add that this determination of the double 'functioning' (predominantly, secondarily) by repression and by ideology, according to whether it is a matter of the (Repressive) State Apparatus or the Ideological State Apparatuses, makes it clear that very subtle explicit or tacit combinations may be woven from the interplay of the (Repressive) State Apparatus
and the Ideological State Apparatuses? Everyday life provides us with innumerable examples of this, but they must be studied in detail if we are to go further than this mere observation.

Nevertheless, this remark leads us towards an understanding of what constitutes the unity of the apparently disparate body of the ISAs. If the ISAs 'function' massively and predominantly by ideology, what unifies their diversity is precisely this functioning, insofar as the ideology by which they function is always in fact unified, despite its diversity and its contradictions, beneath the ruling ideology, which is the ideology of 'the ruling class'. Given the fact that the 'ruling class' in principle holds State power (openly or more often by means of alliances between classes or class fractions), and therefore has at its disposal the (Repressive) State Apparatus, we can accept the fact that this same ruling class is active in the Ideological State Apparatuses insofar as it is ultimately the ruling ideology which is realized in the Ideological State Apparatuses, precisely in its contradictions. Of course, it is a quite different thing to act by laws and decrees in the (Repressive) State Apparatus and to 'act' through the intermediary of the ruling ideology in the Ideological State Apparatuses. We must go into the details of this difference — but it cannot mask the reality of a profound identity. To my knowledge, no class can hold State power over a long period without at the same time exercising its hegemony over and in the State Ideological Apparatuses. I only need one example and proof of this: Lenin's anguished concern to revolutionize the educational Ideological State Apparatus (among others), simply to make it possible for the Soviet proletariat, who had seized State power, to secure the future of the dictatorship of the proletariat and the transition to socialism.7

This last comment puts us in a position to understand that the Ideological State Apparatuses may be not only the state, but also the site of class struggle, and often of bitter forms of class struggle. The class (or class alliance) in power cannot lay down the law in the ISAs as easily as it can in the (repressive) State apparatus, not only because the former ruling classes are able to retain strong positions there for a long time, but also because the resistance of the exploited classes is able to find means and occasions to express itself there, either by the utilization of their contradictions, or by conquering combat positions in them in struggle.8

Let me run through my comments.

If the thesis I have proposed is well-founded, it leads me back to the classical Marxist theory of the State, while making it more precise in one point. I argue that it is necessary to distinguish between State power (and its possession by...) on the one hand, and the State Apparatus on the other. But I add that the State Apparatus contains two bodies: the body of institutions which represent the Repressive State Apparatus on the one hand, and the body of institutions which represent the body of Ideological State Apparatuses on the other.

But if this is the case, the following question is bound to be asked, even in the very summary state of my suggestions: what exactly is the extent of the role of the Ideological State Apparatuses? What is their importance based on? In other words: to what does the 'function' of these Ideological State Apparatuses, which do not function by repression but by ideology, correspond?

On the Reproduction of the Relations of Production

I can now answer the central question which I have left in suspense for many long pages: how is the reproduction of the relations of production secured?

In the topographical language (Infrastructure, Superstructure), I can say: for the most part, it is secured by the legal-political and ideological superstructure.

But as I have argued that it is essential to go beyond this still descriptive language, I shall say: for the most part, it is secured by the exercise of State power in the State Apparatuses, on the one hand the (Repressive) State Apparatus, on the other the Ideological State Apparatuses.

What I have just said must also be taken into account, and it can be assembled in the form of the following three features:

1. All the State Apparatuses function both by repression and by ideology, with the difference that the (Repressive) State Apparatus functions massively and predominantly by repression, whereas the Ideological State Apparatuses function massively and predominantly by ideology.
2. Whereas the (Repressive) State Apparatus constitutes an organized whole whose different parts are
centralized beneath a commanding unity, that of the politics of class struggle applied by the political representatives of the ruling classes in possession of State power; the Ideological State Apparatuses are multiple, distinct, 'relatively autonomous' and capable of providing an objective field to contradictions which express, in forms which may be limited or extreme, the effects of the clashes between the capitalist class struggle and the proletarian class struggle, as well as their subordinate forms.

3. Whereas the unity of the (Repressive) State Apparatus is secured by its unified and centralized organization under the leadership of the representatives of the classes in power executing the politics of the class struggle of the classes in power, the unity of the different Ideological State Apparatuses is secured, usually in contradictory forms, by the ruling ideology, the ideology of the ruling class.

Taking these features into account, it is possible to represent the reproduction of the relations of production in the following way, according to a kind of 'division of labour'.

The role of the repressive State apparatus, insofar as it is a repressive apparatus, consists essentially in securing by force (physical or otherwise) the political conditions of the reproduction of relations of production which are in the last resort relations of exploitation. Not only does the State apparatus contribute generously to its own reproduction (the capitalist State contains political dynasties, military dynasties, etc.), but also and above all, the State apparatus secures by repression (from the most brutal physical force, via mere administrative commands and interdictions, to open and tacit censorship) the political conditions for the action of the Ideological State Apparatuses.

In fact, it is the latter which largely secure the reproduction specifically of the relations of production, behind a 'shield' provided by the repressive State apparatus. It is here that the role of the ruling ideology is heavily concentrated, the ideology of the ruling class, which holds State power. It is the intermediation of the ruling ideology that ensures a (sometimes teeth-gritting) 'harmony' between the repressive State apparatus and the Ideological State Apparatuses, and between the different State Ideological Apparatuses.

Why is the educational apparatus in fact the dominant ideological State apparatus in capitalist social formations, and how does it function?

For the moment it must suffice to say:

1. All ideological State apparatuses, whatever they are, contribute to the same result: the reproduction of the relations of production, i.e. of capitalist relations of exploitation.

2. Each of them contributes towards this single result in the way proper to it. The political apparatus by subjecting individuals to the political State ideology, the 'indirect' (parliamentary) or 'direct' (plebiscitary or fascist) 'democratic' ideology. The communications apparatus by cramming every 'citizen' with daily doses of nationalism, chauvinism, liberalism, moralism, etc., by means of the press, the radio and television. The same goes for the cultural apparatus (the role of sport in chauvinism is one of the first importance), etc. The religious apparatus by recalling in sermons and the other great ceremonies of Birth, Marriage and Death, that man is only ashes, unless he loves his neighbour to the extent of turning the other cheek to whoever strikes first. The family apparatus ... but there is no need to go on.

3. This concert is dominated by a single score, occasionally disturbed by contradictions (those of the remnants of former ruling classes, those of the proletarians and their organizations): the score of the Ideology of the current ruling class which integrates into its music the great themes of the Humanism of the Great Forefathers, who produced the Greek Miracle even before Christianity, and afterwards the Glory of Rome, the Eternal City, and the themes of Interest, particular and general, etc. nationalism, moralism and economism.

4. Nevertheless, in this concert, one ideological State apparatus certainly has the dominant role, although hardly anyone lends an ear to its music: it is so silent! This is the School.

It takes children from every class at infant-school age, and then for years, the years in which the child is most 'vulnerable', squeezed between the family State apparatus and the educational State apparatus, it drills into them, whether it uses new or old methods, a certain amount of 'know-how' wrapped in the ruling ideology (French, arithmetic, natural history, the sciences, literature) or simply the ruling ideology in its pure state (ethics, civic instruction, philosophy). Somewhere
around the age of sixteen, a huge mass of children are ejected 'into production': these are the workers or small peasants. Another portion of scholastically adapted youth carries on: and, for better or worse, it goes somewhat further, until it falls by the wayside and fills the posts of small and middle technicians, white-collar workers, small and middle executives, petty bourgeois of all kinds. A last portion reaches the summit, either to fall into intellectual semi-employment, or to provide, as well as the 'intellectuals of the collective labourer', the agents of exploitation (capitalists, managers), the agents of repression (soldiers, policemen, politicians, administrators, etc.) and the professional ideologists (priests of all sorts, most of whom are convinced 'laymen').

Each mass ejected en route is practically provided with the ideology which suits the role it has to fulfil in class society: the role of the exploited (with a 'highly-developed' 'professional', 'ethical', 'civic', 'national' and a-political consciousness); the role of the agent of exploitation (ability to give the workers orders and speak to them: 'human relations'), of the agent of repression (ability to give orders and enforce obedience 'without discussion', or ability to manipulate the demagogy of a political leader's rhetoric), or of the professional ideologist (ability to treat consciousnesses with the respect, i.e. with the contempt, blackmail, and demagogy they deserve, adapted to the accords of Morality, of Virtue, of 'Transcendence', of the Nation, of France's World Role, etc.).

Of course, many of these contrasting Virtues (modesty, resignation, submissiveness on the one hand, cynicism, contempt, arrogance, confidence, self-importance, even smooth talk and cunning on the other) are also taught in the Family, in the Church, in the Army, in Good Books, in films and even in the football stadium. But no other ideological State apparatus has the obligatory (and not least, free) audience of the totality of the children in the capitalist social formation, eight hours a day for five or six days out of seven.

But it is by an apprenticeship in a variety of know-how wrapped up in the massive inculcation of the ideology of the ruling class that the relations of production in a capitalist social formation, i.e. the relations of exploited to exploiters and exploiters to exploited, are largely reproduced. The mechanisms which produce this vital result for the capitalist regime are naturally covered up and concealed by a universally reigning ideology of the School, universally reigning because it is one of the essential forms of the ruling bourgeois ideology: an ideology which represents the School as a neutral environment purged of ideology (because it is ... lay), where teachers respectful of the 'conscience' and 'freedom' of the children who are entrusted to them (in complete confidence) by their 'parents' (who are free, too, i.e. the owners of their children) open up for them the path to the freedom, morality and responsibility of adults by their own example, by knowledge, literature and their 'liberating' virtues.

I ask the pardon of those teachers who, in dreadful conditions, attempt to turn the few weapons they can find in the history and learning they 'teach' against the ideology, the system and the practices in which they are trapped. They are a kind of hero. But they are rare and how many (the majority) do not even begin to suspect the 'work' the system (which is bigger than they are and crushes them) forces them to do, or worse, put all their heart and ingenuity into performing it with the most advanced awareness (the famous new methods!). So little do they suspect it that their own devotion contributes to the maintenance and nourishment of this ideological representation of the School, which makes the School today as 'natural', indispensable-useful and even beneficial for our contemporaries as the Church was 'natural', indispensable and generous for our ancestors a few centuries ago.

In fact, the Church has been replaced today in its role as the dominant Ideological State Apparatus by the School. It is coupled with the Family just as the Church was once coupled with the Family. We can now claim that the unprecedentedly deep crisis which is now shaking the education system of so many States across the globe, often in conjunction with a crisis (already proclaimed in the Communist Manifesto) shaking the family system, takes on a political meaning, given that the School (and the School-Family couple) constitutes the dominant Ideological State Apparatus, the Apparatus playing a determinant part in the reproduction of the relations of production of a mode of production threatened in its existence by the world class struggle.

On Ideology

When I put forward the concept of an Ideological State Apparatus, when I said that the ISAs 'function by ideology', I invoked a reality which needs a little discussion: ideology.
It is well known that the expression ‘ideology’ was invented by Cabanis, Destutt de Tracy and their friends, who assigned to it as an object the (generic) theory of ideas. When Marx took up the term fifty years later, he gave it a quite different meaning, even in his Early Works. Here, ideology is the system of the ideas and representations which dominate the mind of a man or a social group. The ideologico-political struggle conducted by Marx as early as his articles in the Rheinische Zeitung inevitably and quickly brought him face to face with this reality and forced him to take his earliest intuitions further.

However, here we come upon a rather astonishing paradox. Everything seems to lead Marx to formulate a theory of ideology. In fact, The German Ideology does offer us, after the 1844 Manuscripts, an explicit theory of ideology, but ... it is not Marxist (we shall see why in a moment). As for Capital, although it does contain many hints towards a theory of ideologies (most visibly, the ideology of the vulgar economists), it does not contain that theory itself, which depends for the most part on a theory of ideology in general.

I should like to venture a first and very schematic outline of such a theory. The theses I am about to put forward are certainly not off the cuff, but they cannot be sustained and tested, i.e. confirmed or rejected, except by much thorough study and analysis.

Ideology has no history

One word first of all to expound the reason in principle which seems to me to found, or at least to justify, the project of a theory of ideology in general, and not a theory of particular ideologies, which, whatever their form (religious, ethical, legal, political), always express class positions.

It is quite obvious that it is necessary to proceed towards a theory of ideologies in the two respects I have just suggested. It will then be clear that a theory of ideologies depends in the last resort on the history of social formations, and thus of the modes of production combined in social formations, and of the class struggles which develop in them. In this sense it is clear that there can be no question of a theory of ideologies in general, since ideologies (defined in the double respect suggested above: regional and class) have a history, whose determination in the last instance is clearly situated outside ideologies alone, although it involves them.

On the contrary, if I am able to put forward the project of a theory of ideology in general, and if this theory really is one of the elements on which theories of ideologies depend, that entails an apparently paradoxical proposition which I shall express in the following terms: ideology has no history.

As we know, this formulation appears in so many words in a passage from The German Ideology. Marx utters it with respect to metaphysics, which, he says, has no more history than ethics (meaning also the other forms of ideology).

In The German Ideology, this formulation appears in a plainly positivist context. Ideology is conceived as a purely illusion, a pure dream, i.e. as nothingness. All its reality is external to it. Ideology is thus thought as an imaginary construction whose status is exactly like the theoretical status of the dream among writers before Freud. For these writers, the dream was the purely imaginary, i.e. null, result of 'day's residues', presented in an arbitrary arrangement and order, sometimes even 'inverted', in other words, in 'disorder'. For them, the dream was the imaginary, it was empty, null and arbitrarily 'stuck together' (bricolage), once the eyes had closed, from the residues of the only full and positive reality, the reality of the day. This is exactly the status of philosophy and ideology (since in this book philosophy is ideology par excellence) in The German Ideology.

Ideology, then, is for Marx an imaginary assemblage (bricolage), a pure dream, empty and vain, constituted by the 'day's residues' from the only full and positive reality, that of the concrete history of concrete material individuals materially producing their existence. It is on this basis that ideology has no history in The German Ideology, since its history is outside it, where the only existing history is, the history of concrete individuals, etc. In The German Ideology, the thesis that ideology has no history is therefore a purely negative thesis, since it means both:

1. ideology is nothing insofar as it is a pure dream (manufactured by who knows what power: if not by the alienation of the division of labour, but that, too, is a negative determination);
2. ideology has no history, which emphatically does not mean that there is no history in it (on the
contrary, for it is merely the pale, empty and inverted reflection of real history) but that it has no history of its own.

Now, while the thesis I wish to defend formally speaking adopts the terms of The German Ideology ("ideology has no history"), it is radically different from the positivist and historicist thesis of The German Ideology.

For on the one hand, I think it is possible to hold that ideologies have a history of their own (although it is determined in the last instance by the class struggle); and on the other, I think it is possible to hold that ideology in general has no history, not in a negative sense (its history is external to it), but in an absolutely positive sense.

This sense is a positive one if it is true that the peculiarity of ideology is that it is endowed with a structure and a functioning such as to make it a non-historical reality, i.e. an omni-historical reality, in the sense in which that structure and functioning are immutable, present in the same form throughout what we can call history, in the sense in which the Communist Manifesto defines history as the history of class struggles, i.e. the history of class societies.

To give a theoretical reference-point here, I might say that, to return to our example of the dream, in its Freudian conception this time, our proposition: ideology has no history, can and must (and in a way which has absolutely nothing arbitrary about it, but, quite the reverse, is theoretically necessary, for there is an organic link between the two propositions) be related directly to Freud's proposition that the unconscious is eternal, i.e. that it has no history.

If eternal means, not transcendental to all (temporal) history, but omnipresent, trans-historical and therefore immutable in form throughout the extent of history, I shall adopt Freud's expression word for word, and write ideology is eternal, exactly like the unconscious. And I add that I find this comparison theoretically justified by the fact that the eternity of the unconscious is not unrelated to the eternity of ideology in general.

That is why I believe I am justified, hypothetically at least, in proposing a theory of ideology in general, in the sense that Freud presented a theory of the unconscious in general.

To simplify the phrase, it is convenient, taking into account what has been said about ideologies, to use the plain term ideology to designate ideology in general, which I have just said has no history, or, what comes to the same thing, is eternal, i.e. omnipresent in its immutable form throughout history (= the history of social formations containing social classes). For the moment I shall restrict myself to 'class societies' and their history.

Ideology is a 'representation' of the imaginary relationship of individuals to their real conditions of existence.

In order to approach my central thesis on the structure and functioning of ideology, I shall first present two theses, one negative, the other positive. The first concerns the object which is 'represented' in the imaginary form of ideology, the second concerns the materiality of ideology.

**THESIS 1:** Ideology represents the imaginary relationship of individuals to their real conditions of existence.

We commonly call religious ideology, ethical ideology, legal ideology, political ideology, etc., so many 'world outlooks'. Of course, assuming that we do not live one of these ideologies as the truth (e.g. 'believe' in God, Duty, Justice, etc. . . . ), we admit that the ideology we are discussing from a critical point of view, examining it as the ethnologist examines the myths of a 'primitive society', that these 'world outlooks' are largely imaginary, i.e. do not 'correspond to reality'.

However, while admitting that they do not correspond to reality, i.e. that they constitute an illusion, we admit that they do make allusion to reality, and that they need only be 'interpreted' to discover the reality of the world behind their imaginary representation of that world (ideology = illusion/allusion).

There are different types of interpretation, the most famous of which are the mechanistic type, current in the eighteenth century (God is the imaginary representation of the real King), and the 'hermeneutic' interpretation, inaugurated by the earliest Church Fathers, and revived by Feuerbach and the theologico-philosophical school which descends from him, e.g. the theologian Barth (to Feuerbach, for example, God is the essence of real Man). The essential point is
that on condition that we interpret the imaginary transposition (and inversion) of ideology we arrive at the conclusion that in ideology 'men represent their real conditions of existence to themselves in an imaginary form'.

Unfortunately, this interpretation leaves one small problem unsettled: why do men 'need' this imaginary transposition of their real conditions of existence in order to 'represent to themselves' their real conditions of existence?

The first answer (that of the eighteenth century) proposes a simple solution: Priests or Despots are responsible. They 'forged' the Beautiful Lies so that, in the belief that they were obeying God, men would in fact obey the Priests and Despots, who are usually in alliance in their imposture, the Priests acting in the interests of the Despots or vice versa, according to the political positions of the 'theoreticians' concerned. There is therefore a cause for the imaginary transposition of the real conditions of existence: that cause is the existence of a small number of cynical men who base their domination and exploitation of the 'people' on a fabricated representation of the world which they have imagined in order to enslave other minds by dominating their imaginations.

The second answer (that of Feuerbach, taken over word for word by Marx in his Early Works) is more 'profound', i.e. just as false. It, too, seeks and finds a cause for the imaginary transposition and distortion of men's real conditions of existence, in short, for the alienation in the imaginary of the representation of men's conditions of existence. This cause is no longer Priests or Despots, nor their active imagination and the passive imagination of their victims. This cause is the material alienation which reigns in the conditions of existence of men themselves. This is how, in The Jewish Question and elsewhere, Marx defends the Feuerbachian idea that men make themselves an alienated (= imaginary) representation of their conditions of existence because these conditions of existence are themselves alienating (in the 1844 Manuscripts: because these conditions are dominated by the essence of alienated society — 'alienated labour').

All these interpretations thus take literally the thesis which they presuppose, and on which they depend, i.e. that what is reflected in the imaginary representation of the world found in an ideology is the conditions of existence of men, i.e. their real world.

Now I can return to a thesis which I have already advanced: it is not their real conditions of existence, their real world, that 'men' 'represent to themselves' in ideology, but above all it is their relation to those conditions of existence which is represented to them there. It is this relation which is at the centre of every ideological, i.e. imaginary, representation of the real world. It is this relation that contains the 'cause' which has to explain the imaginary distortion of the ideological representation of the real world. Or rather, to leave aside the language of causality it is necessary to advance the thesis that it is the imaginary nature of this relation which underlies all the imaginary distortion that we can observe (if we do not live in its truth) in all ideology.

To speak in a Marxist language, if it is true that the representation of the real conditions of existence of the individuals occupying the posts of agents of production, exploitation, repression, ideologization and scientific practice, does in the last analysis arise from the relations of production, and from relations deriving from the relations of production, we can say the following: all ideology represents in its necessarily imaginary distortion not the existing relations of production (and the other relations that derive from them), but above all the (imaginary) relationship of individuals to the relations of production and the relations that derive from them. What is represented in ideology is therefore not the system of the real relations which govern the existence of individuals, but the imaginary relation of those individuals to the real relations in which they live.

If this is the case, the question of the 'cause' of the imaginary distortion of the real relations in ideology disappears and must be replaced by a different question: why is the representation given to individuals of their (individual) relation to the social relations which govern their conditions of existence and their collective and individual life necessarily an imaginary relation? And what is the nature of this imaginairness? Posed in this way, the question explodes the solution by a 'clique', by a group of individuals (Priests or Despots) who are the authors of the great ideological mystification, just as it explodes the solution by the alienated character of the real world. We shall see why later in my exposition. For the moment I shall go no further.

THESIS II: Ideology has a material existence.

I have already touched on this thesis by saying that the 'ideas' or 'representations', etc., which seem to
make up ideology do not have an ideal (idéal or idée) or spiritual existence, but a material existence. I even suggested that the ideal (idéal, idée) and spiritual existence of 'ideas' arises exclusively in an ideology of the 'idea' and of ideology, and let me add, in an ideology of what seems to have 'founded' this conception since the emergence of the sciences, i.e. what the practitioners of the sciences represent to themselves in their spontaneous ideology as 'ideas', true or false. Of course, presented in affirmative form, this thesis is unproven. I simply ask that the reader be favourably disposed towards it, say, in the name of materialism. A long series of arguments would be necessary to prove it.

This hypothetical thesis of the not spiritual but material existence of 'ideas' or other 'representations' is indeed necessary if we are to advance in our analysis of the nature of ideology. Or rather, it is merely useful to us in order the better to reveal what every at all serious analysis of any ideology will immediately and empirically show to every observer, however critical.

While discussing the ideological State apparatuses and their practices, I said that each of them was the realization of an ideology (the unity of these different regional ideologies – religious, ethical, legal, political, aesthetic, etc. – being assured by their subjection to the ruling ideology). I now return to this thesis: an ideology always exists in an apparatus, and its practice, or practices. This existence is material.

Of course, the material existence of the ideology in an apparatus and its practices does not have the same modality as the material existence of a paving-stone or a rifle. But, at the risk of being taken for a Neo-Aristotelian (NB Marx had a very high regard for Aristotle), I shall say that 'matter is discussed in many senses', or rather that it exists in different modalities, all rooted in the last instance in 'physical' matter.

Having said this, let me move straight on and see what happens to the 'individuals' who live in ideology, i.e. in a determinate (religious, ethical, etc.) representation of the world whose imaginary distortion depends on their imaginary relation to their conditions of existence, in other words, in the last instance, to the relations of production and to class relations (ideology = an imaginary relation to real relations). I shall say that this imaginary relation is itself endowed with a material existence.

Now I observe the following.

An individual believes in God, or Duty, or Justice, etc. This belief derives (for everyone, i.e. for all those who live in an ideological representation of ideology, which reduces ideology to ideas endowed by definition with a spiritual existence) from the ideas of the individual concerned, i.e. from him as a subject with a consciousness which contains the ideas of his belief. In this way, i.e. by means of the absolutely ideological 'conceptual device' (dispositif) thus set up (a subject endowed with a consciousness in which he freely forms or freely recognizes ideas in which he believes), the (material) attitude of the subject concerned naturally follows.

The individual in question behaves in such and such a way, adopts such and such a practical attitude, and, what is more, participates in certain regular practices which are those of the ideological apparatus on which 'depend' the ideas which he has in all consciousness freely chosen as a subject. If he believes in God, he goes to Church to attend Mass, kneels, prays, confesses, does penance (once it was material in the ordinary sense of the term) and naturally repents and so on. If he believes in Duty, he will have the corresponding attitudes, inscribed in ritual practices 'according to the correct principles'. If he believes in Justice, he will submit unconditionally to the rules of the Law, and may even protest when they are violated, sign petitions, take part in a demonstration, etc.

Throughout this schema we observe that the ideological representation of ideology is itself forced to recognize that every 'subject' endowed with a 'consciousness' and believing in the 'ideas' that his 'consciousness' inspires in him and freely accepts, must 'act according to his ideas', must therefore inscribe his own ideas as a free subject in the actions of his material practice. If he does not do so, 'that is wicked'.

Indeed, if he does not do what he ought to do as a function of what he believes, it is because he does something else, which, still as a function of the same idealist scheme, implies that he has other ideas in his head as well as those he proclaims, and that he acts according to these other ideas, as a man who is either 'inconsistent' (‘no one is willingly evil’) or cynical, or perverse.

In every case, the ideology of ideology thus recognizes, despite its imaginary distortion, that the 'ideas' of a human subject exist in his actions, or ought to exist in his actions, and if that is not the case, it lends
him other ideas corresponding to the actions (however perverse) that he does perform. This ideology talks of actions: I shall talk of actions inserted into practices. And I shall point out that these practices are governed by the rituals in which these practices are inscribed, within the material existence of an ideological apparatus, be it only a small part of that apparatus: a small mass in a small church, a funeral, a minor match at a sports club, a school day, a political party meeting, etc.

Besides, we are indebted to Pascal's defensive 'dialectic' for the wonderful formula which will enable us to invert the order of the notional schema of ideology. Pascal says more or less: 'Kneel down, move your lips in prayer, and you will believe.' He thus scandalously inverts the order of things, bringing, like Christ, not peace but strife, and in addition something hardly Christian (for woe to him who brings scandal into the world!) — scandal itself. A fortunate scandal which makes him stick with Jansenist defiance to a language that directly names the reality.

I will be allowed to leave Pascal to the arguments of his ideological struggle with the religious ideologisation of his day. And I shall be expected to use a more directly Marxist vocabulary, if that is possible, for we are advancing in still poorly explored domains.

I shall therefore say that, where only a single subject (such and such an individual) is concerned, the existence of the ideas of his belief is material in that his ideas are his material actions inserted into material practices governed by material rituals which are themselves defined by the material ideological apparatus from which derive the ideas of that subject. Naturally, the four inscriptions of the adjective 'material' in my proposition must be affected by different modalities: the materialities of a displacement for going to mass, of kneeling down, of the gesture of the sign of the cross, or of the mea culpa, of a sentence, of a prayer, of an act of contrition, of a penitence, of a gaze, of a hand-shake, of an external verbal discourse or an 'internal' verbal discourse (consciousness), are not one and the same materiality. I shall leave on one side the problem of a theory of the differences between the modalities of materiality.

It remains that in this inverted presentation of things, we are not dealing with an 'inversion' at all, since it is clear that certain notions have purely and simply disappeared from our presentation, whereas others on the contrary survive, and new terms appear.

Disappeared: the term ideas.

Survive: the terms subject, consciousness, belief, actions.

Appear: the terms practices, rituals, ideological apparatus.

It is therefore not an inversion or overturning (except in the sense in which one might say a government or a glass is overturned), but a reshuffle (of a non-ministerial type), a rather strange reshuffle, since we obtain the following result.

Ideas have disappeared as such (insofar as they are endowed with an ideal or spiritual existence), to the precise extent that it has emerged that their existence is inscribed in the actions of practices governed by rituals defined in the last instance by an ideological apparatus. It therefore appears that the subject acts insofar as he is acted by the following system (set out in the order of its real determination): ideology existing in a material ideological apparatus, prescribing material practices governed by a material ritual, which practices exist in the material actions of a subject acting in all consciousness according to his belief.

But this very presentation reveals that we have retained the following notions: subject, consciousness, belief, actions. From this series I shall immediately extract the decisive central term on which everything else depends: the notion of the subject.

And I shall immediately set down two conjoint theses:

1. there is no practice except by and in an ideology;
2. there is no ideology except by the subject and for subjects.

I can now come to my central thesis.

Ideology interpellates individuals as subjects

This thesis is simply a matter of making my last proposition explicit: there is no ideology except by the subject and for subjects. Meaning, there is no ideology except for concrete subjects, and this destination for ideology is only made possible by the subject; meaning, by the category of the subject and its functioning.

By this I mean that, even if it only appears under this name (the subject) with the rise of bourgeois ideology, above all with the rise of legal ideology, the category of the subject (which may function under
other names: e.g., as the soul in Plato, as God, etc.) is the constitutive category of all ideology, whatever its determination (regional or class) and whatever its historical date — since ideology has no history.

I say: the category of the subject is constitutive of all ideology, but at the same time and immediately I add that the category of the subject is not constitutive of all ideology insofar as all ideology has the function (which defines it) of 'constituting' concrete individuals as subjects. In the interaction of this double constitution exists the functioning of all ideology, ideology being nothing but its functioning in the material forms of existence of that functioning.

In order to grasp what follows, it is essential to realize that both he who is writing these lines and the reader who reads them are themselves subjects, and therefore ideological subjects (a tautological proposition), i.e. that the author and the reader of these lines both live 'spontaneously' or 'naturally' in ideology in the sense in which I have said that 'man is an ideological animal by nature'.

That the author, insofar as he writes the lines of a discourse which claims to be scientific, is completely absent as a 'subject' from 'his' scientific discourse (for all scientific discourse is by definition a subject-less discourse, there is no 'Subject of science' except in an ideology of science) is a different question which I shall leave on one side for the moment.

As St Paul admirably put it, it is in the 'Logos', meaning in ideology, that we 'live, move and have our being'. It follows that, for you and for me, the category of the subject is a primary 'obviousness' (obviousnesses are always primary): it is clear that you and I are subjects (free, ethical, etc....). Like all obviousnesses, including those that make a word 'name a thing' or 'have a meaning' (therefore including the obviousness of the 'transparency' of language), the 'obviousness' that you and I are subjects — and that that does not cause any problems — is an ideological effect, the elementary ideological effect. It is indeed a peculiarity of ideology that it imposes (without appearing to do so, since these are 'obviousnesses') obviousnesses as obviousnesses, which we cannot fail to recognize and before which we have the inevitable and natural reaction of crying out (aloud or in the 'still, small voice of conscience'): 'That's obvious! That's right! That's true!' At work in this reaction is the ideological recognition function which is one of the two functions of ideology as such (its inverse being the function of misrecognition – méconnaissance).

To take a highly 'concrete' example, we all have friends who, when they knock on our door and we ask, through the door, the question 'Who's there?', answer (since 'it's obvious') 'It's me'. And we recognize that 'it is him', or 'her'. We open the door, and 'it's true, it really was she who was there'. To take another example, when we recognize somebody of our (previous) acquaintance ((re)-connaissance) in the street, we show him that we have recognized him (and have recognized that he has recognized us) by saying to him 'Hello, my friend', and shaking his hand (a material ritual practice of ideological recognition in everyday life — in France, at least; elsewhere, there are other rituals).

In this preliminary remark and these concrete illustrations, I only wish to point out that you and I are always already subjects, and as such constantly practice the rituals of ideological recognition, which guarantee for us that we are indeed concrete, individual, distinguishable and (naturally) irreplaceable subjects. The writing I am currently executing and the reading you are currently performing are also in this respect rituals of ideological recognition, including the 'obviousness' with which the 'truth' or 'error' of my reflections may impose itself on you.

But to recognize that we are subjects and that we function in the practical rituals of the most elementary everyday life (the hand-shake, the fact of calling you by your name, the fact of knowing, even if I do not know what it is, that you 'have' a name of your own, which means that you are recognized as a unique subject, etc.) — this recognition only gives us the 'consciousness' of our incessant (eternal) practice of ideological recognition — its consciousness, i.e. its recognition — but in no sense does it give us the (scientific) knowledge of the mechanism of this recognition. Now it is this knowledge that we have to reach, if you will, while speaking in ideology, and from within ideology we have to outline a discourse which tries to break with ideology, in order to dare to be the beginning of a scientific (i.e. subjectless) discourse on ideology.

Thus in order to represent why the category of the 'subject' is constitutive of ideology, which only exists by constituting concrete subjects as subjects, I shall employ a special mode of exposition: 'concrete'
enough to be recognized, but abstract enough to be thinkable and thought, giving rise to a knowledge.

As a first formulation I shall say: all ideology hails or interpellates concrete individuals as concrete subjects, by the functioning of the category of the subject.

This is a proposition which entails that we distinguish for the moment between concrete individuals on the one hand and concrete subjects on the other, although at this level concrete subjects only exist insofar as they are supported by a concrete individual.

I shall then suggest that ideology 'acts' or 'functions' in such a way that it 'recruits' subjects among the individuals (it recruits them all), or 'transforms' the individuals into subjects (it transforms them all) by that very precise operation which I have called interpellation or hailing, and which can be imagined along the lines of the most commonplace everyday police (or other) hailing: 'Hey, you there!'\footnote{Major theoretical ideas and their implications.}

Assuming that the theoretical scene I have imagined takes place in the street, the hailed individual will turn round. By this mere one-hundred-and-eighty-degree physical conversion, he becomes a subject. What? Because he has recognized that the hail was 'really' addressed to him, and that it was really him who was hailed (and not someone else). Experience shows that the practical telecommunication of hailings is such that they hardly ever miss their mark: verbal call or whistle, the one hailed always recognizes that it is really him who is being hailed. And yet it is a strange phenomenon, and one which cannot be explained solely by 'guilt feelings', despite the large numbers who 'have something on their consciences'.

Naturally for the convenience and clarity of my little theoretical theatre I have had to present things in the form of a sequence, with a before and an after, and thus in the form of a temporal succession. There are individuals walking along. Somewhere (usually behind them) the hail rings out: 'Hey, you there!' One individual (nine times out of ten it is the right one) turns round, believing/suspecting/knowing that it is for him, i.e. recognizing that 'it really is he' who is meant by the hailing. But in reality these things happen without any succession. The existence of ideology and the hailing or interpellation of individuals as subjects are one and the same thing.

I might add: what thus seems to take place outside ideology (to be precise, in the street), in reality takes place in ideology. What really takes place in ideology seems therefore to take place outside it. That is why those who are in ideology believe themselves by definition outside ideology: one of the effects of ideology is the practical denigration of the ideological character of ideology by ideology: ideology never says, 'I am ideological'. It is necessary to be outside ideology, i.e. in scientific knowledge, to be able to say: I am in ideology (a quite exceptional case) or (the general case): I was in ideology. As is well known, the accusation of being in ideology only applies to others, never to oneself (unless one is really a Spinozist or a Marxist, which, in this matter, is to be exactly the same thing). Which amounts to saying that ideology has no outside (for itself), but at the same time that it is nothing but outside (for science and reality).

Spinrota explained this completely two centuries before Marx, who practised it but without explaining it in detail. But let us leave this point, although it is heavy with consequences, consequences which are not just theoretical, but also directly political, since, for example, the whole theory of criticism and self-criticism, the golden rule of the Marxist-Leninist practice of the class struggle, depends on it.

Thus ideology hails or interpellates individuals as subjects. As ideology is eternal, I must now suppress the temporal form in which I have presented the functioning of ideology, and say: ideology has always already interpellated individuals as subjects, which amounts to making it clear that individuals are always already interpellated by ideology as subjects, which necessarily leads us to one last proposition: individuals are always already subjects. Hence individuals are 'abstract' with respect to the subjects which they always already are. This proposition might seem paradoxical.

That an individual is always already a subject, even before he is born, is nevertheless the plain reality, accessible to everyone and not a paradox at all. Freud shows that individuals are always 'abstract' with respect to the subjects they always already are, simply by noting the ideological ritual that surrounds the expectation of a 'birth', that 'happy event'. Everyone knows how much and in what way an unborn child is expected. Which amounts to saying, very prosaically, if we agree to drop the 'sentiments', i.e. the forms of family ideology (paternal/maternal/conjugal/fraternal)
in which the unborn child is expected: it is certain in advance that it will bear its Father's Name, and will therefore have an identity and be irreplaceable. Before its birth, the child is therefore already a subject, appointed as a subject in and by the specific familial ideological configuration in which it is 'expected' once it has been conceived. I hardly need add that this familial ideological configuration is, in its uniqueness, highly structured, and that it is in this implacable and more or less 'pathological' (presupposing that any meaning can be assigned to that term) structure that the former subject-to-be will have to 'find' its place, i.e. 'become' the sexual subject (boy or girl) which it already is in advance. It is clear that this ideological constraint and pre-appointment, and all the rituals of rearing and then education in the family, have some relationship with what Freud studied in the forms of the pre-genital and genital 'stages' of sexuality, i.e. in the 'grip' of what Freud registered by its effects as being the unconscious. But let us leave this point, too, on one side.

[...]

Let us decipher into theological language this wonderful necessity for the duplication of the Subject into subjects and of the Subject itself into a subject-Subject.

We observe that the structure of all ideology, interpelling individuals as subjects in the name of a Unique and Absolute Subject is specular, i.e. a mirror-structure, and doubly specular: this mirror duplication is constitutive of ideology and ensures its functioning. Which means that all ideology is centered, that the Absolute Subject occupies the unique place of the Centre, and interpelles around it the infinity of individuals into subjects in a double mirror-connexion such that it subjects the subjects to the Subject, while giving them in the Subject in which each subject can contemplate its own image (present and future) the guarantee that this really concerns them and Him, and that since everything takes place in the Family (the Holy Family: the Family is in essence Holy), 'God will recognize his own in it', i.e. those who have recognized God, and have recognized themselves in Him, will be saved.

Let me summarize what we have discovered about ideology in general.

The duplicate mirror-structure of ideology ensures simultaneously:

1. the interpellation of ‘individuals’ as subjects;
2. their subjection to the Subject;
3. the mutual recognition of subjects and Subject, the subjects’ recognition of each other, and finally the subject’s recognition of himself;16
4. the absolute guarantee that everything really is so, and that on condition that the subjects recognize what they are and behave accordingly, everything will be all right: Amen – ‘So be it’.

Result: caught in this quadruple system of interpellation as subjects, of subjection to the Subject, of universal recognition and of absolute guarantee, the subjects ‘work’, they ‘work by themselves’ in the vast majority of cases, with the exception of the ‘bad subjects’ who on occasion provoke the intervention of one of the detachments of the (repressive) State apparatus. But the vast majority of (good) subjects work all right ‘all by themselves’, i.e. by ideology (whose concrete forms are realized in the Ideological State Apparatuses). They are inserted into practices governed by the rituals of the ISAs. They ‘recognize’ the existing state of affairs (das Bestehende), that ‘it really is true that it is so and not otherwise’, and that they must be obedient to God, to their conscience, to the priest, to de Gaulle, to the boss, to the engineer, that thou shalt ‘love thy neighbour as thyself’, etc. Their concrete, material behaviour is simply the inscription in life of the admirable words of the prayer: Amen – ‘So be it’.

Yes, the subjects ‘work by themselves’. The whole mystery of this effect lies in the first two moments of the quadruple system I have just discussed, or, if you prefer, in the ambiguity of the term subject. In the ordinary use of the term, subject in fact means: (1) a free subjectivity, a centre of initiatives, author of and responsible for its actions; (2) a subject being, who submits to a higher authority, and is therefore stripped of all freedom except that of freely accepting his submission. This last note gives us the meaning of this ambiguity, which is merely a reflection of the effect which produces it: the individual is interpellated as a (free) subject in order that he shall submit freely to the commandments of the Subject, i.e. in order that he shall (freely) accept his subjection, i.e. in order that he shall make the gestures and actions of his subjection ‘all by himself’.

There are no subjects except by and for their subjection. That is why they ‘work all by themselves’.
So be it! ..." This phrase which registers the effect to be obtained proves that it is not 'naturally' so ('naturally': outside the prayer, i.e. outside the ideological intervention). This phrase proves that it has to be so if things are to be what they must be, and let us let the words slip: if the reproduction of the relations of production is to be assured, even in the processes of production and circulation, everyday in the 'consciousness', i.e. in the attitudes of the individual-subject occupying the posts which the socio-technical division of labour assigns to them in production, exploitation, repression, ideologization, scientific practice, etc. Indeed, what is really in question in this mechanism of the mirror recognition of the Subject and of the individuals interrelated as subjects, and of the guarantee given by the Subject to the subjects if they freely accept their subjection to the Subject's 'commandments'? The reality in question in this mechanism, the reality which is necessarily ignored (mirocognition/ignorance) is indeed, in the last resort, the reproduction of the relations of production and of the relations deriving from them.

January–April 1969

P.S. If these few schematic theses allow me to illuminate certain aspects of the functioning of the Superstructure and its mode of intervention in the Infrastructure, they are obviously abstract and necessarily leave several important problems unanswered, which should be mentioned:

1. The problem of the total process of the realization of the reproduction of the relations of production.

As an element of this process, the ISAs contribute to this reproduction. But the point of view of their contribution alone is still an abstract one.

It is only within the processes of production and circulation that this reproduction is realized. It is realized by the mechanisms of those processes, in which the training of the workers is 'completed', their posts assigned them, etc. It is in the internal mechanisms of these processes that the effect of the different ideologies is felt (above all the effect of legal-ethical ideology).

But this point of view is still an abstract one. For in a class society the relations of production are relations of exploitation, and therefore relations between antagonistic classes. The reproduction of the relations of production, the ultimate aim of the ruling class, cannot therefore be a merely technical operation training and distributing individuals for the different posts in the 'technical division' of labour. In fact there is no 'technical division' of labour except in the ideology of the ruling class: every 'technical' division, every 'technical' organization of labour is the form and mask of a social (= class) division and organization of labour. The reproduction of the relations of production can therefore only be a class undertaking. It is realized through a class struggle which counterposes the ruling class and the exploited class.

The total process of the realization of the reproduction of the relations of production is therefore still abstract, insofar as it has not adopted the point of view of this class struggle. To adopt the point of view of reproduction is therefore, in the last instance, to adopt the point of view of the class struggle.

2. The problem of the class nature of the ideologies existing in a social formation.

The 'mechanism' of ideology in general is one thing. We have seen that it can be reduced to a few principles, expressed in a few words (as 'poor' as those which, according to Marx, define production in general, or in Freud, define the unconscious in general). If there is any truth in it, this mechanism must be abstract with respect to every real ideological formation.

I have suggested that the ideologies were realized in institutions, in their rituals and their practices, in the ISAs. We have seen that on this basis they contribute to that form of class struggle, vital for the ruling class, the reproduction of the relations of production. But the point of view itself, however real, is still an abstract one.

In fact, the State and its Apparatuses only have meaning from the point of view of the class struggle, as an apparatus of class struggle ensuring class oppression and guaranteeing the conditions of exploitation and its reproduction. But there is no class struggle without antagonistic classes. Whoever says class struggle of the ruling class says resistance, revolt and class struggle of the ruled class.

That is why the ISAs are not the realization of ideology in general, nor even the conflict-free realization of the ideology of the ruling class. The ideology of the ruling class does not become the ruling ideology by the grace of God, nor even by virtue of the seizure of State power alone. It is by the installation of the ISAs
in which this ideology is realized and realizes itself that it becomes the ruling ideology. But this installation is not achieved all by itself; on the contrary, it is the stake in a very bitter and continuous class struggle: first against the former ruling classes and their positions in the old and new ISAs, then against the exploited class.

But this point of view of the class struggle in the ISAs is still an abstract one. In fact, the class struggle in the ISAs is indeed an aspect of the class struggle, sometimes an important and symptomatic one: e.g. the anti-religious struggle in the eighteenth century, or the 'crisis' of the educational ISA in every capitalist country today. But the class struggles in the ISAs is only one aspect of a class struggle which goes beyond the ISAs. The ideology that a class in power makes the ruling ideology in its ISAs is indeed 'realized' in those ISAs, but it goes beyond them, for it comes from elsewhere. Similarly, the ideology that a ruled class manages to defend in and against such ISAs goes beyond them, for it comes from elsewhere.

It is only from the point of view of the classes, i.e. of the class struggle, that it is possible to explain the ideologies existing in a social formation. Not only is it from this starting-point that it is possible to explain the realization of the ruling ideology in the ISAs and of the forms of class struggle for which the ISAs are the seat and the stake. But it is also and above all from this starting-point that it is possible to understand the provenance of the ideologies which are realized in the ISAs and confront one another there. For it is true that the ISAs represent the *form* in which the ideology of the ruling class must *necessarily* be realized, and the form in which the ideology of the ruled class must *necessarily* be measured and confronted, ideologies are not 'born' in the ISAs but from the social classes at grips in the class struggle: from their conditions of existence, their practices, their experience of the struggle, etc.

*April 1970*

Notes

1 Marx gave it is scientific concept: *variable capital*.
3 *Topography* from the Greek *topos*: place. A topography represents in a definite space the respective *sites* occupied

4 To my knowledge, Gramsci is the only one who went any distance in the road I am taking. He had the 'remarkable' idea that the State could not be reduced to the (Repressive) State Apparatus, but included, as he put it, a certain number of institutions from 'civil society': the Church, the Schools, the trade unions, etc. Unfortunately, Gramsci did not systematize his institutions, which remained in the state of acute but fragmentary notes (cf. Gramsci, *Selections from the Prison Notebooks* (International Publishers, 1971), pp. 12, 259, 260-3; see also the letter to Tatiana Schuch. 7 September 1931, in *Lettere del Cancro* (Rizzardi, 1968), p. 479.

5 The family obviously has other 'functions' than that of an ISA. It intervenes in the reproduction of labour power. In different modes of production it is the unit of production and/or the unit of consumption.

6 The 'Law' belongs both to the (Repressive) State Apparatus and to the system of the ISAs.

7 In a pathetic text written in 1937, Krupskaya relates the history of Lenin's desperate efforts and what she regards as his failure.

8 What I have said in these few brief words about the class struggle in the ISAs is obviously far from exhaust- ing the question of the class struggle.

To approach this question, two principles must be borne in mind:

*The first principle was formulated by Marx in the Preface to A Contribution to the Critique of Political Economy.* In considering such transformations [a social revolution] a distinction should always be made between the material transformation of the economic conditions of production, which can be determined with the precision of natural science, and the legal, political, religious, aesthetic or philosophical — in short, ideological forms in which men become conscious of this conflict and fight it out. 'The class struggle is thus expressed and exercised in ideological forms, thus also in the ideological forms of the ISAs. But the class struggle extends far beyond these forms, and it is because it extends beyond them that the struggle of the exploited classes may also be exercised in the forms of the ISAs, and thus turn the weapon of ideology against the classes in power.'

This by virtue of the *second principle* the class struggle extends beyond the ISAs because it is rooted elsewhere than in ideology, in the Infrastructure, in the relations of production, which are relations of exploitation and constitute the base for class relations.

For the most part. For the relations of production are first reproduced by the materiality of the processes of
production and circulation. But it should not be forgotten that ideological relations are immediately present in these same processes.

For that part of reproduction to which the Repressive State Apparatus and the Ideological State Apparatus contribute.

I use this very modern term deliberately. For even in Communist circles, unfortunately, it is a commonplace to ‘explain’ some political deviation (left or right opportunism) by the action of a ‘clique’.

Which borrowed the legal category of subject in law to make an ideological notion: man is by nature a subject.

Linguists and those who appeal to linguistics for various purposes often run up against difficulties which arise because they ignore the action of the ideological effects in all discourses – including even scientific discourses.

NB: this double ‘currently’ is one more proof of the fact that ideology is ‘eternal’, since these two ‘currentlys’ are separated by an indefinite interval; I am writing these lines on 6 April 1969, you may read them at any subsequent time.

Hailing as an everyday practice subject to a precise ritual takes a quite ‘special’ form in the policeman’s practice of ‘hailing’ which concerns the hailing of ‘suspects’.

Hegel is (unknowingly) an admirable ‘theoretician’ of ideology insofar as he is a ‘theoretician’ of Universal Recognition who unfortunately ends up in the ideology of Absolute Knowledge. Feuerbach is an astonishing ‘theoretician’ of the mirror connexion, who unfortunately ends up in the ideology of the Human Essence. To find the material with which to construct a theory of the guarantee, we must turn to Spinoza.
